

Aditya Kadam

AI Solutions Architect — building production GenAI systems for enterprises worldwide. LLMs, Agentic AI, RAG, Fine-Tuning.

Pune, Maharashtra, India · adityakadam.de@gmail.com · +91 88300 97489 · linkedin.com/in/adityakadammm

SUMMARY

AI Solutions Architect with end-to-end ownership of GenAI systems shipped to production across healthcare, finance, retail, consulting, and fitness. Delivered seven enterprise platforms for Deloitte (Malaysia, India, Singapore, Australia), Unilever, Westpac, FairPrice Singapore, and early-stage startups — frequently as the sole AI engineer on the engagement. Architecture, fine-tuning, agentic workflows, APIs, and user-facing products at scale.

EXPERIENCE

Assistant Manager, AI Solutions

June 2024 — Present

Deloitte

Pune, India · cross-border delivery

Delivered five high-impact AI engagements across Malaysia, India, Singapore, and Australia spanning enterprise automation, competitor intelligence, financial risk, data engineering, and talent acquisition — each architected and shipped end-to-end.

MyAssist (Malaysia) — No-code GenAI app builder enabling non-technical business users to spin up chat assistants, document reviewers, and workflow automations in a few clicks. Built on Azure OpenAI, GPT-4o, LangChain, and Azure AI Search.

AI Navigator (Malaysia, India, Australia) — Competitor intelligence platform that autonomously scrapes news, financial disclosures, and tech signals across three countries to generate strategic reports. Built with Gemini, Vertex AI Web Search, RAG pipelines, and FAISS on GCP.

IBIC (India) — Financial and risk chatbot integrated with cloud drives, databases, and uploaded documents; runs calculations, generates formatted reports, and auto-sends email briefings. Built with LangChain, GPT-4o, FAISS, FastAPI, Dash, and BigQuery.

Agentic Data Modeller (Westpac, Australia) — Cut Westpac's data-modelling timeline from six months to four with a self-reviewing LangChain agent that follows the internal quality checklist, identifies its own errors, and iterates autonomously until output meets standard.

HR AI (Singapore) — Intelligent hiring screener that cuts recruitment noise and surfaces quality candidates using agentic workflows, vector search, and Azure-hosted models.

Software Developer

August 2023 — June 2024

HCLTech

Noida, India

Built production ML and deep-learning components for enterprise clients; contributed to data pipelines, modelling, and deployment workflows across multiple engagements.

Data Scientist (Freelance)

February 2023 — June 2024

Independent

Remote

End-to-end ML and DL delivery: data preprocessing across numeric, tabular, image, video, text, and audio modalities; dataset generation, collection, and scraping.

Text classification with a BERT + CNN + multi-head attention fusion model; multilingual POS tagger using ELMo + CNN; object detection projects across the YOLO family.

Lexical text and document simplification using Falcon 7B; recommendation systems; statistical forecasting and language modelling at production quality.

EXPERIENCE (CONTINUED)

Data Scientist
Swasthya AI · backed by 100X.VC

July 2023 — January 2024
Remote

Led creation of a personalised oncology chatbot fine-tuning Llama 2 on real cancer treatment data, enabling patients to securely discuss diagnosis, treatment, and medications.

Owned data mining, warehousing, and DBMS workstreams; integrated the chatbot into existing systems and shipped iterative updates incorporating new medical literature.

Data Science Intern
ResoluteAI.in

July 2022 — October 2022
Bengaluru, India

Built a product-wise sales forecasting model for a dairy company reaching 90% accuracy, enabling demand planning, pricing strategy, and waste reduction.

Developed a neural-network sugar-price prediction model with 95% accuracy, used to organise costing, control inventory, and hedge against market fluctuations.

Shipped a YOLOv7-based factory-floor monitoring system for PPE compliance (mask, glove, uniform) and behaviour monitoring, improving safety, quality control, and security.

Data Analyst
Intellisqr

July 2022 — August 2022
Remote

Built Power BI dashboards and translated insights into commercial recommendations for client market performance.

Back-End Developer · Data Engineer (Freelance)
Elhi · Independent

Oct 2021 — April 2022
Remote

Back-end development, data visualisation, and Power BI dashboard delivery; solution recommendations for client market performance.

SELECTED PROJECTS

FitVerse AI — personal project. Personalised fitness and diet-planning platform powered by LangGraph agents, Azure OpenAI, and Supabase. Agent orchestration, plan generation, and a polished user-facing app.

FairPrice CX Engine — Singapore. Sommelier-style personalisation and experience-curation platform powered by Google ADK and Gemini for one of Singapore's largest retailers.

SKILLS

GenAI & LLMs	LLMs, RAG, Fine-Tuning, Agentic AI, Prompt Engineering, LangChain, LangGraph, Google ADK, GPT-4o, Gemini, Llama 2, Falcon
ML & Data Science	Statistical Data Analysis, NLP, Deep Learning, BERT, ELMo, YOLO, TensorFlow, SMOTE, Feature Engineering, Recommendation Systems
Cloud & Infra	Azure OpenAI, Azure AI Search, GCP, Vertex AI, BigQuery, FAISS, Supabase, PostgreSQL, Docker
Engineering	Python, FastAPI, React, Node.js, Vite, Dash, Alembic, GitHub
Delivery	Client-facing delivery across four countries, cross-cultural collaboration, end-to-end ownership, mentoring, agile execution under tight deadlines

EDUCATION

Symbiosis International University
Executive MBA, International Business

Jan 2026 — Feb 2028

Vellore Institute of Technology
B.Tech, Computer Science Engineering — specialisation in Data Analytics

Jun 2019 — May 2023
