SUMMARY

AI Solutions Architect with end-to-end ownership of GenAI systems shipped to production across healthcare, finance, retail, consulting, and fitness. Delivered seven enterprise platforms for Deloitte (Malaysia, India, Singapore, Australia), Unilever, Westpac, FairPrice Singapore, and early-stage startups — frequently as the sole AI engineer on the engagement. Architecture, fine-tuning, agentic workflows, APIs, and user-facing products at scale.

EXPERIENCE

Assistant Manager, AI Solutions June 2024 – Present · Pune, India · Cross-border delivery
Deloitte TT India LLP

Delivered six high-impact AI engagements across Malaysia, India, Singapore, and Australia spanning enterprise automation, competitor intelligence, financial risk, data engineering, talent acquisition, and document automation — each architected and shipped end-to-end.

MyAssist *Malaysia*

- PROBLEM** Non-technical Deloitte business users were locked out of AI capability — spinning up chat assistants, document reviewers, or workflow automations required developer involvement and weeks of lead time.
- SOLUTION** Built MyAssist, a no-code GenAI app builder on Azure OpenAI, GPT-4o, LangChain, and Azure AI Search. Business users configure and deploy AI tools through a guided interface — no engineering ticket required.
- IMPACT** Compressed AI tool deployment from weeks to minutes. Non-technical teams across the engagement self-served AI workflows independently — eliminating the engineering bottleneck entirely.

AI Navigator *Malaysia · India · Australia*

- PROBLEM** Deloitte strategy teams were manually monitoring competitor moves, financial disclosures, and tech signals across three countries — a process that took hours, produced stale insights, and didn't scale.
- SOLUTION** Built a competitor intelligence platform using Gemini, Vertex AI Web Search, RAG pipelines, and FAISS on GCP. The system autonomously scrapes news, disclosures, and tech signals and generates strategic reports on demand.
- IMPACT** Replaced hours of manual research with an on-demand intelligence engine. Cross-country signal monitoring went from reactive to continuous — strategic reports generated in seconds instead of half-days.

IBIC — Financial & Risk Chatbot *India*

- PROBLEM** Financial and risk analysts were spending significant time manually pulling data from cloud drives, databases, and uploaded documents, then formatting that data into reports and sending briefings by hand.

- SOLUTION** Built IBIC on LangChain, GPT-4o, FAISS, FastAPI, Dash, and BigQuery. The chatbot connects to cloud drives, databases, and documents; runs calculations; generates formatted reports; and auto-sends email briefings on trigger.
- IMPACT** Eliminated manual data-pulling and report-formatting workflows. Analysts redirected time from document assembly to higher-value analysis — and the briefing cycle became fully automated.

Agentic Data Modeller *Westpac · Australia*

- PROBLEM** Westpac's data modelling timeline was six months — bottlenecked by the manual review cycle, where human checkers identified errors only after full drafts were submitted, requiring expensive rework loops.
- SOLUTION** Built a self-reviewing LangChain agent that follows Westpac's internal quality checklist autonomously — identifying its own errors, iterating on outputs, and only surfacing results when they meet standard.
- IMPACT** Cut the data modelling timeline from six months to four — a 33% reduction — by eliminating the human review rework cycle and making quality enforcement automatic and continuous.

HR AI — Intelligent Hiring Screener *Singapore*

- PROBLEM** Deloitte's Singapore recruitment function was drowning in candidate volume — manual screening created noise, delayed shortlisting, and surfaced low-quality candidates for senior review.
- SOLUTION** Built an intelligent hiring screener using agentic workflows, vector search, and Azure-hosted models. The system scores, ranks, and surfaces quality candidates automatically before human review begins.
- IMPACT** Dramatically reduced recruitment noise. Senior reviewers received pre-qualified shortlists instead of raw applicant pools — compressing time-to-shortlist and improving candidate quality per review hour.

FairPrice CX Engine *Singapore · FairPrice Group*

- PROBLEM** FairPrice, one of Singapore's largest retailers, lacked a personalised customer experience layer — product discovery and experience curation were generic, not tailored to individual customer preferences and behaviour.
- SOLUTION** Built a sommelier-style personalisation and experience-curation platform powered by Google ADK and Gemini — delivering curated, personalised product and experience recommendations at scale.
- IMPACT** Delivered a production personalisation engine for one of Singapore's largest retail groups — bringing sommelier-style curation to a mass consumer audience via Google's latest AI infrastructure.

Deloitte Design — GenAI Document Automation Platform *Deloitte · Enterprise*

- PROBLEM** Deloitte teams were losing high-value delivery time manually creating RFP responses, proposal decks, DOCX reports, and PDFs while struggling to maintain approved brand standards, client templates, and formatting consistency across every deliverable.
- SOLUTION** Designed and developed a governed GenAI document automation platform built on FastAPI, React, Pydantic, OpenAI, and FAISS with PPTX and DOCX renderers. Users fill a structured form, upload reference documents, and select approved templates. The platform generates brand-compliant HTML section-wise, allows chat-based regeneration, and exports template-compliant PPTX and DOCX deliverables. Reusable generation assets — SKILL.md, DESIGN.md, and tokens.css — enforce consistency across every output.

IMPACT Compressed document creation from manual multi-hour drafting into a controlled AI-assisted pipeline. Delivered plug-and-play workflow with reduced rework, stronger brand governance, and reusable generation infrastructure that scales across engagement types.

Full Stack Developer — .NET

August 2023 – June 2024 · Noida, India

HCLTech

PROBLEM Enterprise clients needed production-ready full stack systems and ML components built reliably — with consistent .NET back-end architecture, data pipelines, and deployment workflows across multiple simultaneous engagements.

SOLUTION Built full stack applications using .NET and contributed production ML and deep-learning components for enterprise clients — owning back-end architecture, data pipelines, modelling, and deployment workflows end-to-end.

IMPACT Delivered reliable, production-grade full stack and ML systems across client engagements — contributing to multi-team delivery pipelines under enterprise-grade quality and deadline standards.

Data Scientist (Freelance)

February 2023 – June 2024 · Remote

Independent

PROBLEM Early-stage clients needed high-quality ML and NLP solutions across diverse data modalities — text, tabular, image, video, audio — but lacked the in-house talent to scope, build, and ship them.

SOLUTION Delivered end-to-end ML and DL projects including a BERT + CNN + multi-head attention fusion classifier, a multilingual POS tagger (ELMo + CNN), YOLO-family object detection, Falcon 7B document simplification, recommendation systems, and statistical forecasting models — from preprocessing through production.

IMPACT Shipped production-quality ML systems across modalities and use cases — giving clients access to senior ML capability without a full-time hire.

Data Scientist

July 2023 – January 2024 · Remote

Swasthya AI · backed by 100X.VC

PROBLEM Oncology patients needed a safe, private way to discuss diagnosis, treatment, and medications — but no existing system was fine-tuned on real cancer treatment data or integrated into existing clinical workflows.

SOLUTION Led creation of a personalised oncology chatbot by fine-tuning Llama 2 on real cancer treatment data. Owned data mining, warehousing, and DBMS workstreams; integrated the chatbot into existing systems and shipped iterative updates incorporating new medical literature.

IMPACT Delivered a production chatbot enabling patients to securely discuss oncology topics — fine-tuned on real clinical data and continuously updated as new medical literature was incorporated.

Data Science Intern

July 2022 – October 2022 · Bengaluru, India

ResoluteAI.in

PROBLEM A dairy company needed demand forecasting, pricing strategy, and waste reduction — but was operating without predictive models, making inventory and pricing decisions on intuition alone.

SOLUTION Built a product-wise sales forecasting model reaching 90% accuracy; developed a neural-network sugar-price prediction model with 95% accuracy; shipped a YOLOv7-based factory-floor monitoring system for PPE compliance and behaviour monitoring.

IMPACT 90% accurate demand forecasting enabled reliable demand planning and pricing strategy. 95% accurate sugar-price model organised costing and hedging. YOLOv7 factory monitor improved safety, quality control, and security simultaneously.

Data Analyst

July 2022 – August 2022 · Remote

Intellisgr

PROBLEM Client teams lacked a structured view of market performance data — decisions were made without consolidated dashboards or a clear line from data to commercial recommendation.

SOLUTION Built Power BI dashboards and translated raw insights into actionable commercial recommendations for client market performance.

IMPACT Delivered decision-ready dashboards that connected data directly to commercial recommendations — giving client teams a structured analytical foundation.

Back-End Developer & Data Engineer (Freelance)

October 2021 – April 2022 · Remote

Elhi · Independent

PROBLEM Clients needed back-end systems, data visualisation, and Power BI dashboards built reliably — with clear recommendations connecting the data to commercial decisions.

SOLUTION Delivered back-end development, data visualisation, Power BI dashboard builds, and solution recommendations across client engagements.

IMPACT Provided clients with functional data systems and actionable commercial recommendations — building foundational analytical infrastructure across multiple engagements.

SELECTED PROJECTS

FitVerse AI *Personal Project*

PROBLEM 80 million Indians join gyms and most quit by week six — not because of discipline, but because no app was ever built for them: their gym's machines, their dietary restrictions (Jain, PCOS, regional cuisine), their actual fitness level.

SOLUTION Personalised fitness and diet-planning platform powered by LangGraph agents, Azure OpenAI, and Supabase. 17-signal onboarding generates fully personalised workout splits and 5-meal-per-day plans. Agent orchestration adapts the plan daily based on logged performance, recovery check-ins, and dietary adherence.

IMPACT End-to-end user-facing production app with agent orchestration, real-time plan adaptation, India-first dietary intelligence, gym equipment mapping, gamified rank progression, and a polished PWA interface — live at V1.0.

SKILLS

GenAI & LLMs	LLMs, RAG, Fine-Tuning, Agentic AI, Prompt Engineering, LangChain, LangGraph, Google ADK, GPT-4o, Gemini, Llama 2, Falcon
ML & Data Science	Statistical Data Analysis, NLP, Deep Learning, BERT, ELMo, YOLO, TensorFlow, SMOTE, Feature Engineering, Recommendation Systems
Cloud & Infra	Azure OpenAI, Azure AI Search, GCP, Vertex AI, BigQuery, FAISS, Supabase, PostgreSQL, Docker
Engineering	Python, .NET, FastAPI, React, Node.js, Vite, Dash, Alembic, GitHub
Delivery	Client-facing delivery across four countries, cross-cultural collaboration, end-to-end ownership, mentoring, agile execution under tight deadlines

EDUCATION

Symbiosis International University

Jan 2026 – Feb 2028

Executive MBA, International Business

Vellore Institute of Technology

Jun 2019 – May 2023

B.Tech, Computer Science Engineering — Specialisation in Data Analytics
